

THE SCIENCE BEHIND USANA FIBERGY® PLUS

Make Your Body Regular, Make Your Body Right With Fibergy Plus

Fibergy Plus is a low-calorie, flavorless fiber blend that can be added to juice or USANA's **Nutrimeal™** and contains 12 grams of dietary fiber per serving. Research has shown that more than 90 percent of Americans do not get the recommended 21–38 grams of fiber in their daily diets. It is essential to consume dietary fiber on a regular basis as different types of fiber play specific roles in the digestive process and have long-term effects on the overall health of your body.

Digestive Health

Digestive health lies at the core of our overall health. A healthy digestive system helps our body efficiently break down many of the nutrients we consume into forms that are easily absorbed, maximizing the benefits of vitamins, minerals, and antioxidants and defending against nutritional deficiencies. Healthy digestion is also important for normal bowel regularity—another critical component of good health.*

Healthy Bacteria

Some bacteria are good for your body. Inulin is a prebiotic—a non-digestible food ingredient that stimulates the growth and/or activity of bacteria in the digestive system, which is beneficial to the health of the body. Inulin is a special type of fiber that serves as fertilizer for healthy bacteria in the digestive system. These healthy bacteria assist the digestive tract in the absorption of nutrients and the breakdown of foods.*

The large intestine contains up to 500 different types of bacteria, which contribute to a number of biological functions in the body. To maintain well-balanced flora in the large intestine, there must be more beneficial non-pathogenic bacteria. Therefore, it is essential to promote the growth of “good” bacteria.*
